§ 371 (c)(1),

(2), (4) Date: **Jun. 30, 2014**(57) **ABSTRACT**

An apparatus, method and system for beam-steering configurations and tests in a communication system. In one embodiment, the apparatus includes a processor **620** and memory **650** including computer program code. The memory **650** and the computer program code are further configured to, with the processor **620**, cause the apparatus to receive a beam-steering test configuration from a serving network element in response to a request for a beam-steering test with a network element, and perform the beam-steering test with the network element in the beam-steering test configuration.
